

Data Scientist

Artificial Intelligence & Machine Learning Division

Company: **TechNova Analytics Pvt. Ltd.**
Location: **Pune, Maharashtra (Hybrid)**
Type: **Full-Time**
Experience: **1–3 Years**
Posted: **April 2026**

ABOUT THE ROLE

TechNova Analytics is looking for a **Data Scientist** to join our AI/ML team. You will work on designing, building, and deploying machine-learning models and LLM-powered pipelines that drive real business decisions. You will collaborate closely with data engineers, product managers, and business stakeholders to convert raw data into measurable impact.

KEY RESPONSIBILITIES

- Design and develop end-to-end ML pipelines for classification, regression, NLP, and recommendation tasks.
- Build and fine-tune Large Language Model (LLM) applications using frameworks like LangChain and LlamaIndex.
- Perform exploratory data analysis (EDA), feature engineering, and model evaluation using Python.
- Deploy models to production via REST APIs (FastAPI / Flask) and monitor performance with MLflow / LangSmith.
- Collaborate with data engineers to build scalable data preprocessing pipelines using SQL and PySpark.
- Write clean, modular, well-documented code following engineering best practices (PEP8, version control).
- Present findings and model explainability reports to non-technical stakeholders.
- Stay updated with the latest research in GenAI, transformers, and applied ML.

REQUIRED SKILLS & TECHNOLOGIES

Python	SQL	Pandas	NumPy	Scikit-learn
TensorFlow	PyTorch	XGBoost	LightGBM	Matplotlib
LangChain	OpenAI API	HuggingFace	FastAPI	REST APIs
MLflow	LangSmith	Docker	Git / GitHub	Jupyter Notebook

QUALIFICATIONS

Minimum Requirements:

- B.E. / B.Tech / B.Sc. in Computer Science, Data Science, Statistics, or related field.
- 1–3 years of hands-on experience in data science or ML engineering roles.
- Strong proficiency in Python and data manipulation libraries.
- Solid understanding of ML algorithms, model evaluation metrics, and cross-validation.
- Experience with at least one deep learning framework (PyTorch or TensorFlow).

Good to Have:

- Experience with LangChain, LLM APIs (OpenAI / Gemini), or RAG architectures.
- Familiarity with cloud platforms — AWS SageMaker, GCP Vertex AI, or Azure ML.
- Knowledge of MLOps tools: MLflow, Kubeflow, or similar.
- Published Kaggle kernels, GitHub projects, or research papers.
- Exposure to vector databases (FAISS, Pinecone, Chroma).

WHAT WE OFFER

Compensation	■6 – ■12 LPA (based on experience)
Work Mode	Hybrid — 3 days office / 2 days remote (Pune)
Learning	Budget for courses, certifications & conferences
Projects	Real-world GenAI products with measurable impact
Growth	Fast-track promotion path in AI/ML track

HOW TO APPLY

Send your updated resume along with your **GitHub profile link** and a brief cover note to **careers@technova-analytics.com** with subject line: *Application – Data Scientist – [Your Name]*.

Shortlisted candidates will be invited for: **Round 1** – Technical screening (Python + ML) · **Round 2** – Case study / Take-home project · **Round 3** – HR discussion.
